## Step 4: Adjust Parameter Weights

Set the importance level for each parameter

| PARAMETER | DEFAULT | DESCRIPTION |
|---|---|---|
| **BS&W (%)** | 100 | Weight for water cut increase trends |
| **Oil Rate (bopd)** | 100 | Weight for oil rate decline trends |
| **GLR (scf/bbl)** | 100 | Weight for gas-liquid ratio decline |
| **Tubing Pressure (psi)** | 50 | Weight for tubing pressure decline |
| **Economic Oil Limit** | 50 bopd | Oil rate threshold for economic limit calculation |

## ⓘ What are weights?

Weights determine how much each parameter influences the ranking. Higher values mean more influence on the final candidate score.

- **0** - Parameter ignored
- **100** - Normal importance (default)
- **100** - Maximum importance

Use the slider for finer control in between.

Tip: Higher weights (up to 100) give more influence to a parameter in the final candidate score. Adjust based on your field's specific conditions.

**BS&W (%)** Increasing = Bad

Value: 100

**Oil Rate (bopd)** Decreasing = Bad

Value: 100

**GLR (scf/bbl)** Decreasing = Bad

Value: 100

**Tubing Pressure (psi)** Decreasing = Issue

Value: 50

---

## Advanced Settings (Optional)

**Base Choke Size** (for normalization)

e.g., 24/64

Normalize all rates to a common choke size to eliminate artificial decline from choke changes.

**Economic Oil Limit (bopd)**

50

Wells below this rate are considered non-economic.

**Outlier Detection Method**

IQR (1.5x)

Method (IQR, Z-score, Hampel) and threshold for outlier removal.

**Outlier Threshold Multiplier**

1.5

Higher values = less aggressive filtering (default 1.5).

**Gas Constraint (MMscf/d)**

e.g., 10

Available lift gas volume. If set, the system ranks wells by efficiency and allocates gas within the constraint.

### ••• Optional supporting steps

These steps improve downstream diagnostics and can be completed before you continue to the trends and results screens.

# Gas Lift Candidate Executive Summary

Generated: July 26, 2026 at 13:12
Dataset: **production_data.xlsx** | Wells Analyzed: **30**
**Selected well scope: 30 selected well(s)**
**Analysis status: Completed. Completed at July 26, 2026 at 12:12**

## Executive Summary

Analysis was completed successfully and results were processed. Analyzed 30 well(s) from production_data.xlsx. Average candidate score is 0.0, with 0 high-priority candidate(s).

- Top 5 candidates: WELL-001, WELL-002, WELL-003, WELL-004, WELL-005
- Average recommended gas per candidate: 0.00 MMscf/d
- Data quality: 30 wells ≥80% good data, 0 wells <60% good data

## Key Observations & Recommendations

**Production Trends**

**Operational Recommendations**
- 1 well(s) have pressure constraints — evaluate compression upgrade.

**Economic Outlook**
- Average candidate score: 0.0 (max 0)
- Estimated CAPEX for top candidates: $2,500,000

## Rough Order-of-Magnitude (ROM) Cost Estimate

| 5 | $2,500,000 | $20,000 | ~12-24 |
|---|---|---|---|
| Top Candidates | Est. CAPEX ($500,000/ well) | Est. OPEX/well/yr | Payback (months) |

*Note: ROM estimates are order-of-magnitude only. Accurate budgeting requires detailed well engineering and vendor quotes.*

## Ranked Gas Lift Candidates

**Filtered to 30 selected well(s)** | Compare With Another Run

**Analysis completed successfully** on July 26, 2026 12:12.

Top candidate
**WELL-001**
Rank #1 with the strongest screening signal
Score: 0

Urgent intervention count
**0**
Wells within 90 days of economic limit

Liquid-loading risk
**0**
Wells flagged as liquid-loaded

Completion outlook
**9**
Wells with a feasible completion pathway
WELL-002, WELL-005, WELL-010, WELL-012, WELL-013, WELL-014, WELL-021, WELL-024, WELL-029

**Ranking rationale:** wells were prioritized using the weighted trend signals from BSW, oil-rate decline, GLR decline, tubing-pressure behavior, plus liquid-loading, economic-limit, and completion-feasibility indicators.

Liquid-loading risk
**0**
Wells flagged by the PVT-based diagnostic

Urgent economics
**0**
Wells within 90 days of economic limit

Feasible completions
**9**
Wells with a feasible gas-lift pathway
WELL-002, WELL-005, WELL-010, WELL-012, WELL-013, WELL-014, WELL-021, WELL-024, WELL-029

Recommended lift gas
**0.00 MMscf/d**
Estimated gas needed across the portfolio

| Average candidate score | Average data quality | High-priority candidates | Medium priority |
|---|---|---|---|
| **0.0** | **93.7%** | **0** | **0** |
| Portfolio signal strength | Average completeness of trends | Score ≥ 25 | Score 15–24 |

## Step 5: Upload Completion Data

Enter well completion details to check gas lift feasibility

### Why is this important?

Gas lift requires sufficient surface injection pressure to reach the mandrel depth. This tool calculates whether your available compression can actually lift the gas to the injection point.

- **Mandrel depths:** List of gas lift mandrel depths in the tubing (feet)
- **Packer depth:** Depth of the packer (feet)
- **Available compression:** Maximum pressure your compressor can deliver (psi)

**Or upload CSV file (optional)**

Choose File No file chosen

### Bulk upload helper

Upload a CSV with columns: *well_id, mandrel_depths, packer_depth, tubing_od, tubing_id, available_compression_pressure*

Download a ready-to-fill CSV template for multiple wells and keep the workflow moving.

Download CSV template

### Saved completion records

**WELL-002** Feasible
Required pressure: 1412.94 psi

**WELL-005** Feasible
Required pressure: 725.7 psi

**WELL-007** Insufficient Injection Pressure
Required pressure: - psi

**WELL-010** Feasible
Required pressure: 386.42 psi

**WELL-012** Feasible
Required pressure: 990.38 psi

**WELL-013** Feasible
Required pressure: 482.77 psi

**WELL-014** Feasible
Required pressure: 813.41 psi

**WELL-021** Feasible
Required pressure: 1898.61 psi

**WELL-023** Insufficient Injection Pressure
Required pressure: - psi

**WELL-024** Feasible
Required pressure: 1865.5 psi

**WELL-029** Feasible
Required pressure: 320.96 psi

**WELL-032** Feasible
Required pressure: 2305.67 psi

**WELL-035** Feasible
Required pressure: 1555.13 psi

**WELL-038** Feasible
Required pressure: 2055.35 psi

**WELL-040** Feasible
Required pressure: 2515.05 psi

**WELL-047** Feasible
Required pressure: 1555.62 psi

**WELL-050** Feasible
Required pressure: 1903.35 psi

**WELL-052** Feasible
Required pressure: 602.83 psi

**WELL-059** Insufficient Injection Pressure

Required pressure: - psi

**WELL-060** Feasible

Required pressure: 3037.79 psi

**WELL-062** Feasible

Required pressure: 1601.41 psi

**WELL-064** Feasible

Required pressure: 833.85 psi

**WELL-065** Feasible

Required pressure: 1917.47 psi

**WELL-069** Feasible

Required pressure: 754.04 psi

**WELL-071** Feasible

Required pressure: 3156.06 psi

**WELL-072** Feasible

Required pressure: 2082.92 psi

**WELL-074** Feasible

Required pressure: 2723.84 psi

**WELL-075** Feasible

Required pressure: 620.74 psi

**WELL-078** Insufficient Injection Pressure

Required pressure: - psi

**WELL-080** Feasible

**Well ID**

e.g., WELL-001

Must match the well name in your production data. Start typing to choose one of the 30 wells from the upload.

**Available Compression Pressure (psi)**

e.g., 2500

Maximum pressure your compressor can deliver

**Mandrel Depths (ft)**

e.g., 3000, 4000, 5000

Comma-separated: e.g., 3000, 4000, 5000

**Packer Depth (ft)**

e.g., 3500

Depth of the tubing packer

**Tubing OD (inch)** (optional)

e.g., 2.875

**Tubing ID (inch)** (optional)

e.g., 2.441

⚠ **Note:** If you don't have exact tubing dimensions, the system will use default values. More accurate dimensions improve the pressure calculation.

## Step 1: Upload Your Well Test Data

Upload your well test data in Excel (.xlsx) or CSV format.

### Required File Format:

- File must be in Excel (.xlsx) or CSV (.csv) format
- Maximum file size: 100 MB
- Must contain these columns: Well, Date, BS&W (%), Net Oil (bopd), Form.GLR (scf/bbl), Prod Method, Test Status, Tubing Pressure (psi), Flow Line Pressure (psi), Well Choke Size

**Drag and drop your file here**

or click the button below to select an Excel or CSV file.

Choose File No file chosen

Upload

Accepted formats: .xlsx, .csv (Max 100 MB)

### What happens next:

1. Your file will be verified for format compatibility
2. You'll map columns from your file to our required fields
3. You'll preview the data to ensure it's correct
4. You'll run the analysis to find gas lift candidates
